Film and Q&A
PARTICLE FEVER

The 2013 documentary tells the story of the first experiments at the Large Hadron Collider in Switzerland, follows the journey of the scientists involved in the project and offers a look into one of the most exciting physics discoveries of our time. Following the screening, Christopher Tully, physics professor at Princeton University, will comment on the film and take part in a Q&A. Tully has conducted research at the European Organization for Nuclear Research for over 25 years and was a member of the team that discovered the Higgs boson. Tully is also author of the textbook “Elementary Particle Physics in a Nutshell” and co-author of “100 Years of Subatomic Physics.”

Film running time: 1 hour, 39 minutes. Community Room
